JST Information Services
Let's discover what you want to know
J-STAGE is an online platform providing easy access to a wide variety of full-text academic articles. Over 1,800 of Japan’s academic societies use J-STAGE to publish their e-journals.

**Diverse content**
- Publications on J-STAGE covers a wide variety of academic fields.

**Databases linked to J-STAGE**
- J-STAGE journals are listed in: CiNii, DOAJ, Web of Science, Scopus, PubMed.

**My J-STAGE**
- Free account service called “My J-STAGE” provides bookmark and alert function.

95% of articles are free access
454.5 million articles downloaded annually
(As of March, 2021)

J-STAGE Data is a data repository that lists and publishes data related to articles on J-STAGE, creating new value by sharing and reusing data following the global trend towards open science.

**Data can now be viewed, cited, and reused independently of the paper**
- Data is automatically assigned a DOI and distributed worldwide as open access data.
- Data can be reproduced, shared, and reused under the conditions specified by the copyright holder.
- Easier to view, find, cite, and use data.
J-GLOBAL is a service based on the concept of “Linking, Expanding, and Sparking.” It links science and technology information, which hitherto stood alone, to support the next generation of ideas. By linking the information entered in the system, we provide opportunities to obtain knowledge and make unexpected discoveries from high-quality S&T information sources within and outside JST.

**Helping you to find:**
- Clues or hints for solving technical issues.
- Eligible researchers for joint research.
- Research with commercial potential at a certain university.

Connecting Japan -Lasting Access-

The Japan Link Center (JaLC) * is the Registration Agency in Japan approved by the DOI Foundation. JaLC registers DOIs for Japanese academic content such as academic journal articles, books, research data, e-learning etc.

* It is administered jointly by National Institute for Materials Science, National Institute of Informatics, National Diet Library and Japan Science and Technology Agency.

(As of October, 2021)

Providing global access to Japanese digital research content
- Ensuring sustained access to content by registering DOIs.
- JaLC members can register DOIs.
- Collaboration with Crossref, DataCite and ORCID.
researchmap is a platform for managing, publishing, and sharing information on researchers in Japan. About 320,000 researchers have registered their profiles and research outputs on researchmap. researchmap has been integrated into the systems of universities and provides features to help users find researchers for industry-academia collaboration and joint research.

Make research activities management easier

- Research achievements can be imported from external literature databases, and AI manages information for you.

JREC-IN Portal is an informative portal site that supports the career development and skill-building of researchers, research assistants, technicians and other research-related human resources. JREC-IN Portal provides 21,000 public job openings per year and is accessed over 1.5 million times per month. The platform provides functions to satisfy all stakeholders.

High-quality services available for free

- Browsing
- Membership registration
- Job posting
- Personal information registration and update
- Job alerts

Exclusive services for recruiting members

- Post job information: Information on job openings is sent to job-seeking members as matching e-mails
- Seek researchers’ information to find highly qualified candidates
- Send inquiry e-mails: Inquiries can be sent to job-seeking members

(JAs of March, 2021)
JDreamⅢ is a comprehensive scientific, technological, and medical bibliographic database containing over 80 million records from sources in Japan and worldwide, including journals, proceedings, and technical papers. JDreamⅢ is provided by G-search. The database records are abstracted and indexed in Japanese with original thesaurus support. JDreamⅢ provides an exhaustive record of research output in Japan.

JDream Expert Finder is a service that enables you to search for the best research partners and key opinion leaders to solve your research problems. JDream Expert Finder is provided by G-search. It contains information on about 1 million researchers, and has analyzed and extracted more than 43 million pieces of JDreamⅢ literature information based on the theory of complex networks.

JDream SR is a service that uses AI to analyze domestic and overseas medical and pharmaceutical literature to discover the relationships between gene mutations, drugs, diseases, outcome indicators, etc., required for genomic medicine and health technology assessment (HTA). It efficiently extracts the information that doctors and evaluators need. JDream SR is provided by G-search.
This website is a public database of JST research and development programs. It contains outlines of over 23,900 research projects and related information, such as titles, researchers, affiliations, research periods, research areas, etc. This database provides sequential information for data which has already been consolidated. In addition, we provide data in response to requests from users such as those conducting data analysis for R&D management.

GRANTS is a service that allows you to search for information on national scientific research projects in an integrated way. This system includes information on over 23,000 projects from JST Project Database and over 957,000 projects from Database of Grants-in-aid for Scientific Research (KAKEN). In the future, we plan to gradually expand the number of participating funding institutions and the scope of search results. This will hopefully contribute to seed searches by industry and information collection from research institutions and researchers, promoting greater connections with relevant parties.
Gakkai Meikan Database is a database of academic societies in Japan and is produced by JST, Science Council of Japan (SCJ), and Japan Science Support Foundation (JSSF). It contains outlines and related information, such as journals, founding date, the goals underlying establishment, etc.

Highly accurate neural machine translation system developed by JST and Kyoto University is now available online. By deep learning with over 5 million bilingual corpora, the system enables users to translate science & technology and patent literature, from Chinese to Japanese and vice versa with high accuracy.

JIPSTI, Japan Information Platform for S&T Innovation, is a portal site for providing information about JST’s information services including J-STAGE, J-GLOBAL, JaLC, researchmap, JREC-IN Portal, and NBDC. STI Updates, a part of JIPSTI’s service, delivers the latest news and trends about production, management, sharing and utilization of S&T information.
